#### ANNUAL REPORT, 1951.

HEALTH DEPARTMENT,

DEWSBURY,

1st August, 1952.

To the Chairman and Members of the Health Committee.

MR. CHAIRMAN AND GENTLEMEN,

I have the honour to present the Annual Report on the health services for Dewsbury for the year 1951.

The Registrar General estimated the civilian population of the town at mid-1951 at 52,990, a decrease of 150 on the corresponding figure for 1950. The natural increase in the population of Dewsbury (that is the excess of live births over deaths) during the year was 185.

Live births registered were 950 composing 471 males and 479 females. Of this number 57 or 6%, were illegitimate as compared with 53 or 5.6% in 1950. The birth rate for the year was 17.93 as compared with 17.7 for the previous year. The local live birth rate was above the national figure of 15.5.

The Still Birth Rate was 19.61 per 1,000 total births a considerable decrease on the previous year's figure of 28.92.

The death rate of  $14\cdot44$  per 1,000 population was above the national rate of  $12\cdot5$  and an increase on the town's 1950 death rate of  $13\cdot41$ . The heaviest mortality was caused by the group including heart disease and other diseases of the circulatory system, which accounted for 277 deaths or  $36\cdot2\%$  of the total of 765 deaths from all causes, and a death rate of  $5\cdot2$  per 1,000 persons living. Cancer (all forms) was responsible for 106 deaths and a death rate of  $2\cdot0$  per 1,000 persons living and causing  $13\cdot8\%$  of the deaths from all causes. Tuberculosis of the respiratory system was the cause of 17 deaths, giving a death rate of  $0\cdot32$  per 1,000 living as against  $0\cdot28$  in 1950. For the second year in succession there were no deaths from non-respiratory tuberculosis.

Out of a total of 765 deaths, 514, i.e.,  $67 \cdot 1\%$  were in persons over 65 years of age, and 173 i.e.,  $22 \cdot 6\%$  were in persons between 45-65 years of age. It will thus be seen that  $89 \cdot 7\%$  of all deaths were in persons over 45 years of age.

The Infant Death Rate, *i.e.*, the number of deaths of children under 1 year per 1,000 live births was 35.79. The national figure was 29.6 and that of the 126 County Boroughs and Great Towns (including London) was 33.9.

The number of cases of infectious diseases (other than tuberculosis) which occurred in Dewsbury during 1951 was 1,055 as against 974 in 1950. Of this total approximately 50% were measles, 32% whooping cough, 6% scarlet fever, 5% dysentery and 5% pneumonia. There were no cases of diphtheria or poliomyelitis.

Immunisation and Vaccination

The number of children from 0-15 years of age who received a complete course of diphtheria prophylactic was 586, compared with 624 for 1950, and 673 for 1949. This gradual fall is a matter of some concern and is probably due to the fact that the incidence of diphtheria has shown a most satisfactory decline during recent years, e.g., in England and Wales deaths have fallen from a pre-war average of 2,800 p.a. to 49 in 1950, and cases have declined from a pre-war average of 55,000 p.a. to 980 in 1950. It is of interest to note that over 9,000,000 children have been immunised since 1941; the year in which the Ministry of Health sponsored its diphtheria immunisation scheme. In Dewsbury there has been no death from diphtheria since 1945. In some ways this gradual fall in the number of immunisations can be compared with vaccination against smallpox, the number of children who are vaccinated being very small indeed, presumably because the chance of contracting smallpox in this country is so limited. It seems that the only sure way of stimulating parents to take full advantage of immunisation against diphtheria and vaccination against smallpox is to have an epidemic of these diseases and it must be remembered such an epidemic can occur anytime, without warning, particularly amongst an unprotected population.

Immunisation against whooping cough is also available at the authority's clinics and the results of a large field trial conducted by the Medical Research Council indicate that the anti-whooping cough vaccines are of considerable value in diminishing the incidence of this disease. Whooping Cough is a most debilitating disease and it is to be hoped that the prospect of its eventual reduction by a campaign similar to that employed for diphtheria will in the near future become effective.

Housing

The provision of houses is still top priority. So much has previously been written about the desirability of all families having their own homes that further discussion would simply be repetition. Suffice it to say that good housing is highly conducive to mental and physical well-being, and as such should be pursued with the utmost vigour.

During the year the Housing Committee decided all cases who applied for rehousing on medical grounds must produce a doctor's certificate, which is forwarded to the Health Department. On receipt of this certificate, the case is investigated by members of the staff of the Health Department and the Medical Officer of Health from these reports decides whether the case is

worthy of recommendation to the Housing Committee for priority. Owing to the extreme shortage of housing and the long waiting lists only the "worst of the worse cases" can receive a recommendation for new housing, and this often means that a seriously ill person who is living in reasonable housing conditions will receive no priority. It must be stressed that every case receives complete investigation, and the fact that one person makes the final decision in all cases, ensures that the same principles of treatment are assured to all applicants. Tuberculosis cases, where it is necessary for the affected person to have a room of his or her own, receive top priority. This action is to be commended as it not only gives more chance for the patient to recover, but also plays a part in the prevention of the transmission of the disease to other persons.

Approximately 90% of the milk supply of the town is pasteurised and it is interesting to note that only one sample of milk which was sent for bacteriological examination for B. Tuberculosis was positive. This sample was taken from ordinary milk, *i.e.*, milk which had received no treatment and did not come from an attested herd. All the necessary measures were taken to deal with this matter.

The implementation of the Model Byelaws adopted by the Council last year, which aim at producing and selling clean food continues, and although there remains much to do and many difficulties to overcome, there is willing co-operation between producers and retailers and their employees with the public health employee of the Corporation. Such co-operation augurs well for the future.

boc

The duties laid upon the Local Authority by the National Health Service Act, 1946, viz., Maternity and Child Welfare, Health Visiting, Midwifery, Home Help and District Nursing, Ambulance Service, Prevention of Illness, Care and After-care and Mental Health were carried out with zeal and efficiency by the members of the Health Department, and full information regarding these duties will be found in this report.

The Home Nursing Service attended 805 cases, and in doing so paid 17.762 visits. There is no doubt that many of these cases would have had to be admitted to hospital if such a service had not been available. In addition to saving the cost of expensive hospital treatment, patients are enabled to remain in their own homes, a course which the vast majority prefer. The large number of letters received at this office from grateful patients show how much this service is appreciated.

The Home Help Service carried out 28,755 hours of work, i.e., 4,700 more hours than the previous year. Many persons are inclined to look upon this service as purely a domestic agency, and do not realise that before any help can be given a recommendation must be given from some medical source. Each case is carefully reviewed, the number of hours of service required is assessed, and all efforts are made to give these hours and a continuity of service. Unfortunately a confinement case which receives top priority often applies without previous notice for immediate help, and this means a home help has to be diverted from less necessitous cases to the confinement case. As a result several cases who receive home help over a long period may have to be without for a short time. Similar difficulties arise when a Home Help has to leave her work as a result of sudden illness. This complication has been unavoidable as Home Helps have been difficult to obtain and each one is fully employed. Now that recruitment is becoming a little easier it may be possible to have one or two home helps who on receipt of a small retaining fee would be willing to be called upon in an emergency.

The Home Help Service is not free, and the amount paid per hour depends upon the income of the applicants, and is based upon an agreed scale. Many cases, including old age pensioners, because of their low income, and according to the scale, receive the service free of charge.

I am firmly convinced that this service like that of the Home Nurses, plays a large part in relieving the anxiety which often accompanies acute or chronic illness and debility, and so brings that comfort and relief which is so essential for early recovery, peace of mind, and happiness in one's home.

Mention must be made of the Health Visitor whose duty is defined as being "for the purpose of giving advice as to the care of young children, persons suffering from illness, and expectant and nursing mothers, and as to the measures necessary to prevent the spread of infection." She continues to play the most important role in the Public Health Services. She deals with the family as a whole, acting as a friend and adviser in all matters appertaining to the promotion of good health and the prevention of illness. She works in close contact with the family doctor assisting him whenever possible with the welfare of his patients. With the ageing population her role will become more and more important as the number of households requiring help and advice will increase. This fact will also mean that the section of the town allotted to each Health Visitor will have to be correspondingly smaller if she is to do her work effectively, and thus the number of Health Visitors will have to be increased.

Unfortunately at the present time and most probably for some considerable time to come, the recruitment of Health Visitors will be extremely limited. Whether this is due to the present salary scales or to the lengthy period involved in securing the necessary qualifications (S.R.N., S.C.M. (Part 1), H.V. Certificate) or to both these factors is a matter worthy of urgent consideration.

It will be noted that the Ambulance Service consisting of both Ambulances and Sitting Case Cars, showed a decrease of 1,120 in the number of patients carried as compared with the previous year, and a corresponding decrease of 8,767 miles in the year's mileage. It does appear that such a reduction or at least part of it, may be due to the steps which have been taken in conjunction with the Hospital authorities and the General Practitioners to deal with any possible abuse of the Service. The Ambulance personnel are fully alive to any possible abuse and report doubtful cases to the Medical Officer of Health for investigation. It must be stated that the number of such cases is now extremely low and, it is my opinion, that an effective and efficient service is functioning.

I am pleased to report that progress is being made with the erection of an Occupation Centre at Savile Town for mentally defective children incapable of being educated at school, and it is hoped that the building will be completed towards the end of 1952. At the present time no facilities exist for dealing adequately with this particular type of child.

In conclusion may I tender to the Chairman and Members of the Health Committee my sincere appreciation of the generous help and support so freely given.

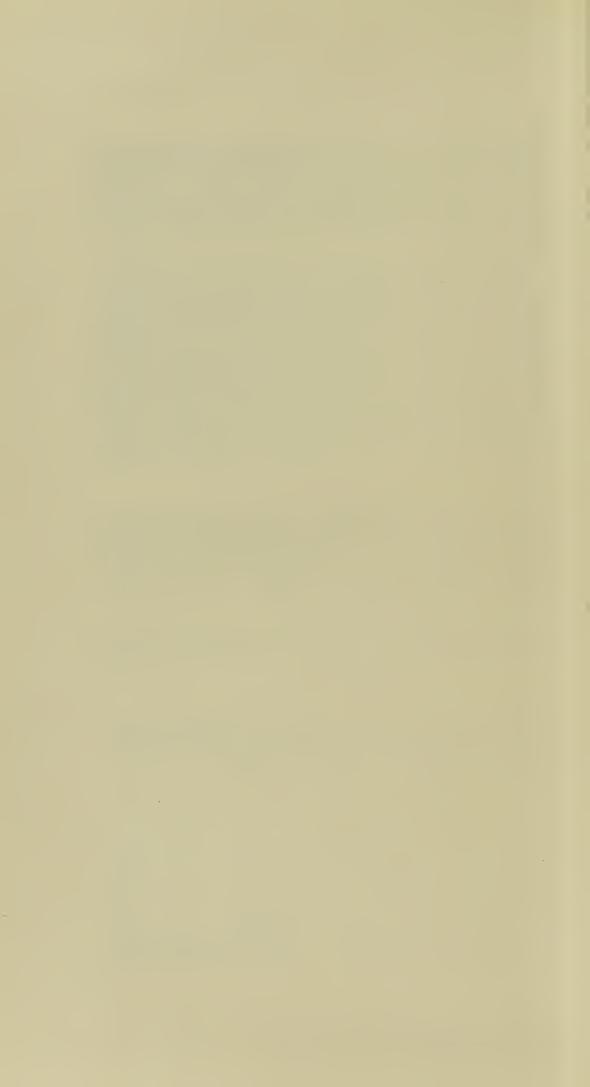

May I also thank the Town Clerk and other officers of the Council for their generous co-operation and help, and lastly and by no means the least, my own staff professional and clerical for their splendid work throughout the year.

I am,

Your obedient Servant,

T. W. ROBSON,

Medical Officer of Health.

#### Population.

1931 Census—54,302.

1951 Census (Preliminary Report)-53,476.

The Registrar General estimated the home population (all ages), in 1951 to be 52,990 a decrease of 150 on the total for 1950.

The natural increase of the population (excess of live births over deaths) was 185.

#### Birth Rate.

In 1951, the number of live births was 950, 10 more than in 1950, giving a birth rate of  $17 \cdot 93$  per 1,000 population compared with the previous year's rate of  $17 \cdot 7$ .

The birth rate for England and Wales was 15.5 per 1,000 population for 1951.

The birth rates and maternal mortality rates for Dewsbury since 1941 are as follows:—

		Birth Rate		Maternal Mortality Rate
1941	•••	14.7	•••	$6 \cdot 31$
1942	•••	17.3	•••	1 · 14
1943	•••	18.7		$1 \cdot 07$
1944	• • •	$20 \cdot 8$		1.8
1945	•••	18.1		Nil
1946	•••	$20 \cdot 4$	•••	1.90
1947		$23 \cdot 9$	•••	$2\cdot 41$
1948	• • •	$19 \cdot 3$	•••	Nil
1949	•••	$19 \cdot 2$	•••	Nil
1950	•••	17 · 7	•••	$2 \cdot 07$
1951		$17 \cdot 93$	•••	Nil

#### Death Rate.

In 1951 the number of deaths was 765, an increase of 52 compared with the previous year and the death rate was  $14\cdot44$  per 1,000 population compared with  $13\cdot41$  in 1950.

The death rate for England and Wales in 1951 was  $12 \cdot 5$  per 1,000 population.

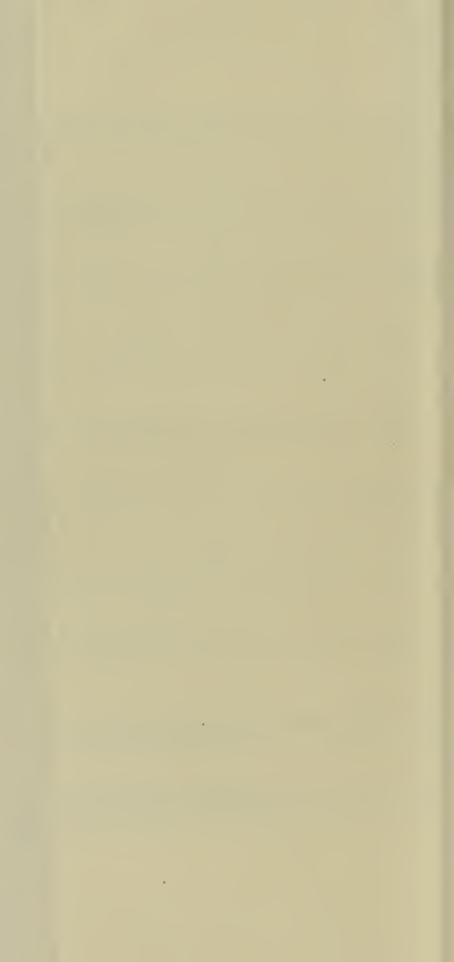

The following Table gives an Analysis of the Causes of Death:

Causes of Death 1951 and comparison with 1950 figures.

#### Premature Babies.

There were 56 live premature babies born in the County Borough of Dewsbury during 1951 representing 5.9% of the live births.

(a)	The	total	number	of	premature	babies	who	were	born	:
-----	-----	-------	--------	----	-----------	--------	-----	------	------	---

(i)	at home	 	 	 7
(ii)	in hospital	 	 	 49

#### (b) The number of those born at home:

(i) who were nursed entirely at home	 6
(ii) who died during the first 24 hours	 Nil
(iii) who died between 1 and 7 days	 Nil
(iv) who survived at the end of one month	 7

#### (c) The

e number of those born in hospital:		
(i) who died during the first 24 hours		3
(ii) who died between 1 and 7 days		4
(iii) who survived at the end of one month	• • •	41

Of 56 premature babies (i.e., 5½ lb. weight or less at birth) 20 were males and 36 females. They included 4 pair of twins and two children were twins to infants who were not premature on birth weight.

#### Premature Infants 1944-1951.

Year	1944	1945	1946	1947	1948	1949	1950	1951
No. of premature infants born	27	26	49	91	64	69	51	56
No. of Live births	979	848	1012	1217	1015	1011	940	950
Premature Infants as a percentage of the live births	2.8%	3.1%	4.8%	7.5%	6.3%	6.8%	5.4%	5 - 9%

The following table shews that of the 56 premature infants born during 1951, 9 (16%) are known to have died before reaching their first birthday, 30 (53.6%) are known to have survived to one year of age, 15 are alive but less than one year of age at the time of writing and 2 have left the district.

#### Marriages.

Mr. B. C. Amies, Superintendent Registrar, has kindly furnished the following information:—

The number of marriage ceremonies during the year 1951 was 487:—

(a)	In the Church of England		•••	 229
(b)	In other chapels and churches	•••	•••	 118
(c)	At the Register Office			 140

#### Marriages 1940-1951.

Year.				
1940	• • •	•••	• • •	617
1941			•••	526
1942			•••	498
1943				352
1944			•••	379
1945		•••	•••	521
1946				570
1947			•••	571
1948			• • •	551
1949				499
1950				482
1951				487

#### Occupations.

The chief occupations in Dewsbury are in the woollen trade and its associated industries, workshops, the distributive trades, coal mining, and cleaning and dyeing. Female labour is important in the heavy woollen industry of which Dewsbury is the principal centre.

#### Unemployment.

I am indebted to Mr. Dixon, Manager of the Dewsbury Labour Exchange, for the information given below:—

#### Registered Unemployed.

		Total
107 89 82	28 39 32	135 128 114 130
	89	89 82 39 32

(The above figures include non-claimants who are registered for employment only, and are not in receipt of unemployment benefit).

The total number of cases placed in employment by the Resettlement Officer during the period was 62, 57 Males and 5 Females.

#### Housing.

For housing inspection statistics see Chief Sanitary Inspector's Report, page 88.

I am indebted to the Borough Architect's Department for the following statistical information.

The number of houses completed in the borough during the year by private enterprise was 21 and the number completed by the Corporation was 246.

Houses built	by	private	enterpr	ise:—	
1946		•••	•••		31
1947		• • •			34
1948					14
1949					13

1946 1947 1948 1949	by	local au	ithority    	:—   	161 149 94

The number of houses completed by the Corporation in 1951 comprised 64 three-bedroom traditional type brick houses, 114 two-bedroom traditional type brick houses, 2 two-bedroom bungalows and 66 one-bedroom bungalows.

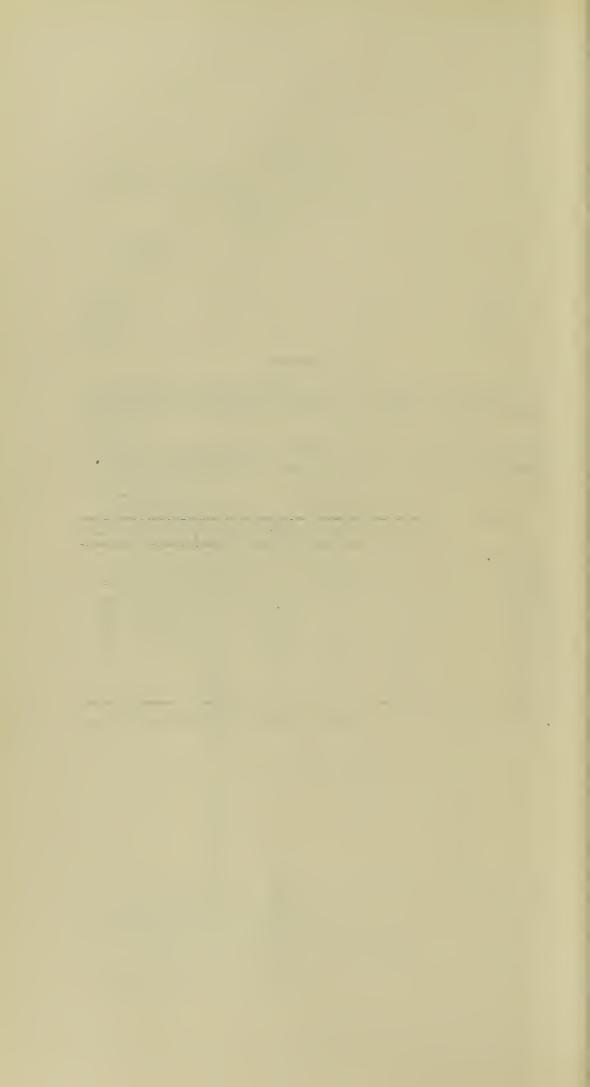

In addition four houses were completed for occupation by members of the fire brigade.

#### Blind Persons.

Mr. B. C. Amies, Chief Officer of Welfare Services has kindly supplied the following information:—

The number of blind persons on the Register on 31st December, 1951, was 143, as shown in the following table:

A	~~~	1	Pa	rtially Blir	nd	Totally Blind

# GENERAL PROVISION OF HEALTH SERVICES FOR THE AREA

#### Public Health Officers.

Particulars of the Public Health Officers, together with information as to their qualifications, are set out on pages 4, 5 and 6.

#### Laboratory Facilities.

All specimens are sent to the Public Health Laboratory Service, Wakefield.

#### Promotion of Cleanliness.

Cases of uncleanliness are dealt with at the cleansing station attached to the Municipal Buildings, Halifax Road, Dewsbury.

A D.D.T. emulsion is the preparation used for the treatment of verminous conditions of the head and benzyl benzoate emulsion for the treatment of scabies.

During 1951, there was one case of head lice and one case of scabies amongst pre-school children, and no cases of scabies amongst adults.

#### Orthopaedic Treatment.

Children suffering from orthopaedic defects are seen by the Consultant Orthopaedic Surgeon at the School Clinic.

#### Nursing Homes.

There are no nursing homes registered or known to exist in Dewsbury.

#### Treatment Centres and Clinics at end of 1951.

The following is a list of Treatment Centres and Clinics in the Borough:—

Place	Time
Westborough Methodist Schoolroom, Green Lane Whitley Methodist Schoolroom Heaton Lodge, Earlsheaton Chidswell Methodist Chapel, Shaw Cross	Monday, 2 p.m.  Alternate Mondays at 2 p.m.  Tuesdays at 2 p.m.  Alternate Tuesdays at 2 p.m.
Health Dept., Municipal Buildings, Halifax Road  Thornbill Council Offices	Wednesday 2 p.m. Saturday 10-30 to 11-30 a.m. (for foods only). Thursday 2 p.m.
Ravensthorpe Council Offices Moorlands Maternity Home	Friday 2 p.m.  Monday 10-30 a.m.  Monday 2 p.m.
Thornhill Council Offices Moorlands Maternity Home	Wed. 10-30 a.m. Wednesday 2 p.m. Thurs. 2 p.m. Friday 10-30 a.m.

<sup>\*</sup>Attended by Medical Officers of the Regional Hospital Board.

#### National Assistance Act 1948, Section 47.

This section empowers the authority on certification by the Medical Officer of Health to require the removal to hospital or institution, subject to approval by a court, of persons who

- (a) are suffering from grave chronic disease, or being aged, infirm or physically incapacitated, are living in insanitary conditions, and
- (b) are unable to devote to themselves, and are not receiving from other persons, proper care and attention.

No one was removed to hospital under this section during the year 1951.

#### Nursery and Child Minders Regulations Act, 1948.

One application was received during the year for registration under this Act. The number of children provided for being 8.

# SANITARY CIRCUMSTANCES OF THE AREA

### WATER.

Mr. D. E. Strachan, Water Engineer and Manager, has kindly supplied the following details of the public water supply in respect of the year ended 31st December, 1951.

Dewsbury County Borough receives water in bulk from three sources, namely:—

- 1. The works of the Dewsbury and Heckmondwike Waterworks Board.
- 2. The Corporation of Bradford.
- 3. The Corporation of Halifax.

Dewsbury Corporation is not responsible for production and treatment of Halifax and Bradford supplies, but is indirectly responsible in that respect for the Board water, being the larger partner in the Dewsbury and Heckmondwike Waterworks Board.

In 1951, the proportions of water from each source were :-

1. Dewsbury and Heckmondwike Waterworks Board 74%2. Bradford Corporation ... ... 16%3. Halifax Corporation ... ... 10%

There has been no change in the source of supply or method of distribution. New water mains have been laid to a Corporation housing site at Chickenley Lane, and a new 9-ins. main has been laid in Forge Lane. Small extensions to existing mains have been made to private building sites. Old mains in various streets have been relaid with new ones. Two new steel tanks have been erected at Bee-Boo, Whitley, and at Grange Moor, replacing the old tanks there.

All houses in the area, except for a few isolated cottages, are supplied from public water mains direct to the houses, with no standpipe supplies.

The rate of consumption per person in 1951 was  $22\cdot 4$  gallons per day for domestic purposes including small trade users, and  $27\cdot 8$  gallons per day for measured trade supplies.

The chemical analyses of the waters supplied to the consumer do not show the water to have any liability to plumbosolvent action.

No contamination has taken place nor has any been suspected.

The Dewsbury and Heckmondwike joint supply is treated by the addition of slaked lime and chlorine; the second and third supplies are treated by their respective authorities and details of treatment are not available.

No restriction of supplies was made during the year 1951.

Public Water Supply - Bacteriological Analysis.

\* Analyses made by Dewsbury Analytical Services. Remainder were analysed by Public Health Laboratory Service, Wakefield. The taking of house tap samples is arranged so that all the sources of bulk supply are investigated.

### SEWERAGE AND SEWAGE DISPOSAL.

Mr. E. H. Staynes, Sewage Works Manager, has kindly supplied the following information:—

There are three sewage purification works serving the Borough, situated at Mitchell Laithes, Ravensthorpe and Smithy Brook, dealing with daily dry weather flows of 6,350,000, 1,000,000 and 25,000 gallons respectively.

The increase in the flow to Mitchell Laithes is brought about by reason of the fact that the work in connection with the interception of sewage previously treated at Millbank (Thornhill) Works, was completed on 17th July, 1951, and consequently Millbank Works has ceased to function since that date.

The flow to Ravensthorpe Works shows no alteration, and the treatment plant is still somewhat under capacity, although effluents discharged to the Spen Beck have been for the most part satisfactory.

The Inquiry by the Ministry of Housing and Local Government, into the scheme of extensions to the Mitchell Laithes Works, was held on 3rd October 1951. The sanction of the Minister is awaited before work can commence.

Notwithstanding the overloading of the treatment plant at Mitchell Laithes, analytical results during the past year have shown that a considerable measure of purification has been obtained.

Mr. J. S. G. Holmes, Borough Engineer and Surveyor, has furnished the following information with regard to sewage disposal:—

The main extensions to the sewerage system have consisted of the Foul and Surface sewering of the second and final portion of the Chickenley Housing Site. The laying of the intercepting sewers at Thornhill Lees, mentioned in the 1950 report, has been completed, and all sewage discharging to the Mill Bank Disposal Works was diverted to Mitchell Laithes on the 18th July, 1951.

Schemes at present under consideration include the sewering of the Wakefield Road Housing Site, the culverting of portions of the Chickenley and Pildacre Becks and Canker Dyke, and surface water sewerage in the Thornhill and Earlsheaton areas.

### RIVERS AND STREAMS.

The information in this section has been kindly contributed by Mr. M. Lovett, Chief Inspector, Yorkshire Ouse River Board, Wakefield:—

The Yorkshire Ouse River Board is the authority responsible for dealing with matters relating to pollution prevention, land drainage and fishery interests, so far as the River Calder and its tributaries are concerned.

The River Calder and its tributaries receive along their entire length effluents from an almost unbroken chain of sewage works and manufactories. The problem of preventing pollution is complicated owing to the small normal flow in proportion to the volume of effluents which discharge into the river. At Kirkthorpe Weir, Wakefield, the dry weather flow is normally about 95 million gallons per day, but during the drought of 1949 the dry weather flow was often as low as 50 million gallons per day. Of the flow of 95 million gallons, one-third can easily be accounted for by effluents from sewage works. In addition, there are millions of gallons of treated trade effluents discharged to the river and its tributaries, so that the amount of used water in the river is at least 50% of the total. If it were not for the compensation water from reservoirs of water undertakings there would be little clean dilution water reaching the river during droughts.

The Board give assistance where aid is sought, to manufacturers, particularly in respect of new industries which give rise to waste liquids requiring special treatment. The Board is of the opinion that the most efficient and economical means of dealing with trade effluents is by draining them into the sewers for treatment at the sewage works of the local authorities.

During the year ending 31st December, 1951, there has been little change in the condition of the River Calder and its tributary streams where they enter the County Borough area.

Only slow progress is being made with the extensions at the Huddersfield County Borough Sewage Works owing to the shortage of steel supplies.

Many schemes for improved methods of dealing with sewage and industrial effluents, including those for Colne Valley, Holmfirth and Sowerby Bridge, are contemplated, but the carrying out of these schemes is dependent on the Government's capital expenditure programme.

Improvements are being carried out which should reduce still further the discoloration of the water in the Spen River, by chemical effluent. The Dewsbury (Batley) Beck has been maintained in its improved condition, but nothing has been done within the County Borough regarding the cleaning out of deposited solids.

A Ministry of Housing and Local Government Inquiry was held on 3rd October, 1951, into the Corporation's application for sanction to a loan of £250,000 for extensions at Mitchell Laithes Sewage Works, but no decision has yet been reached by the Ministry.

The River Board is concerned at the rise in river water temperature brought about by the delivery of hot condensing water from electricity generating stations. A water cooling tower is at present being erected at the Thornhill Power Station.

### SWIMMING BATHS.

Mr. R. H. Betts (Baths Superintendent) has supplied the following information:—

There are two swimming baths, each of 52,500 gallons capacity, owned by the Corporation and situated in Wellington Road, Dewsbury.

The only remedial baths in operation are Turkish, Russian, Vapour, Zotofoam, and Q-Ray Baths which are given without a medical certificate.

The Water Purification and Filtration Plant deals with the water at the rate of 33,000 gallons per hour with a turnover of approximately 3½ hours, sterilisation of the water is carried out by an M.S.P.C.M. type solution feed vacuum chlorinator, also an automatic vacuum chemical solution feeder. The chlorinator introduces to the water a regulated dose of liquid chlorine whilst the chemical feeder introduces a regulated dose of soda ash. In order to precipitate the water in the filters small quantities of aluminoferric are added from time to time.

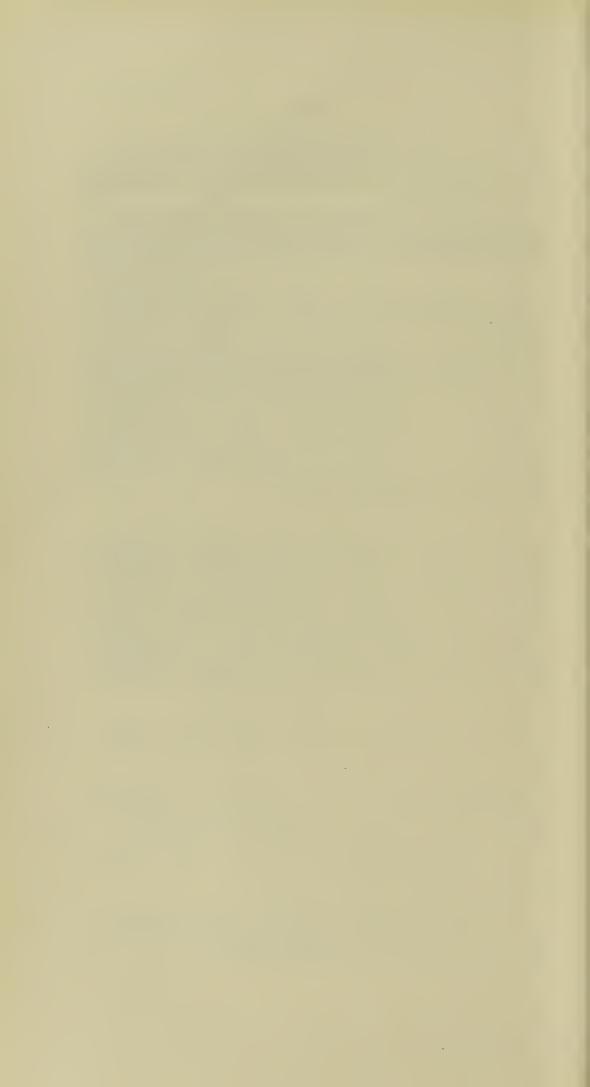

The dose of chlorine required varies with the degree of pollution of the water and, of course, the number of bathers. It is found, however, that in order to maintain a high standard of purity, it is necessary to inject sufficient chlorine to give a reading by ortho-toluidine test of  $1\cdot 50$  to 3 parts per million; should, however, the bathing load be exceptionally heavy, then a heavier dose of chlorine, up to 10 parts per million, is administered when the bath is closed and the pool is left undisturbed overnight. Should it be found next morning that the chlorine has not disappeared entirely the excess or surplus can easily be removed by an injection of sodium thio-sulphate.

In order to keep a p.H. value of  $7 \cdot 4$  to 8 as may be desired a regulated dose of soda ash solution is added to the water.

Examination of the water is carried out morning and afternoon and is done by a levibond comparator using orthotolidine reagent for chlorine, and phenol red for alkalinity.

The Sanitary Department take samples of water periodically for bacteriological and chemical tests.

The Baths are very well attended and used extensively by the school children, and the proficiency in swimming by the children and others is of a very high standard.

NATIONAL HEALTH SERVICE ACT 1946

### CARE OF MOTHERS AND YOUNG CHILDREN.

(National Health Service Act, 1946—Section 22).

### ANTE-NATAL CLINICS.

There are three ante-natal clinics in the Borough administered by the Corporation, these are situated at Moorlands Maternity Home, Thornhill Council Offices, and Heaton Lodge, Earlsheaton.

Staincliffe General Hospital, Dewsbury, have a maternity wing and Dewsbury mothers are admitted on recommendation from the Medical Officer of Health. Staincliffe administer their own ante-natal and post-natal clinics.

The Corporation ante-natal clinics provide ante-natal care for all mothers, Dewsbury residents and non-residents, confined in Moorlands Maternity Home, and for Dewsbury mothers having domiciliary confinements.

The following table shows the attendance at the Corporation ante-natal clinics during 1951:—

Moorlands Maternity		First Attendances	Subsequent Attendances	Total Attd.
Home Cases: Dewsbury mothers Non-residents		560 219	4111 972	4671 1191
Domiciliary Cases : Dewsbury mothers		132	495	627
Totals	• • •	911	5578	6489

Routine blood tests are taken from every patient, these are sent to Leeds Blood Transfusion Centre for Group and Rhesus tests, and to Public Health Laboratory Service, Wakefield, for Wasserman and Kahn tests.

During 1951 the number of tests carried out were as follows:—

follows:—					
	Rhesus Tests.	•			
Dewsbury patients:	Rh positive			•••	376
· -	Rh negative				62
	Rh'' Rh or Rh''	rh			3
	Repeat Tests				220
Number of Rhesus tests	s on husbands of l	Dewsb	ury pat	ients	64

### Wasserman and Kahn Tests.

Number of Wasserman and Kahn tests on Dewsbury patients ... ... 691

### Haemoglobin Findings.

Haemoglobin estimations are taken as routine from every patient and during the year 710 tests were taken. These examinations were carried out at the laboratory of the Dewsbury General Hospital.

### Pregnancy Tests.

During 1951 four pregnancy tests were made (1 was positive and three were negative).

### POST-NATAL CLINIC.

The Post-Natal Clinic administered by the Corporation is held at Moorlands Maternity Home and as in the case of the ante-natal clinics, it is attended by non-residents confined in Moorlands Maternity Home as well as by Dewsbury Mothers.

The following table gives details of attendances during 1951:—

		First Attendances	Subsequent Attendances	Total Attd.
Dewsbury mothers Non-residents	• • • •	397 65	65 18	462
Total	•••	462	83	545

# ANTE-NATAL AND POST-NATAL CLINICS— STAINCLIFFE GENERAL HOSPITAL.

The number of attendances by Dewsbury mothers at the ante-natal and post-natal clinics at Staincliffe during 1951 were as follows:—

Ante-Natal:	First Visits Subsequent		$\frac{120}{450}$
Post-Natal:	First Visits Subsequent	Visits	70 Nil

### INFANT WELFARE CLINICS.

Attendances at Infant Welfare Clinics were as follows:-

Clinic			Under	one year	Over	Cases		
Cimic	•		First	Subsequent	First	Subsequent	by M.O.	
Earlsheaton Shaw Cross Whitley			199 136 173 126 38 5	1689 1783 2298 1551 433 93	7 3 1 4 3	379 390 374 684 152 77	457 338 409 379 77	
Westborough	•••	•••	744	8767	20	2292	1830	

The number of infants attending for the first time under one year of age was  $78 \cdot 3\%$  of the number of infants born during the year, an increase of  $6 \cdot 2\%$  on the 1950 figure.

The amount of Milk Foods distributed at these Centres was 28,250 lbs.

The Welfare Clinics continue to be well patronised and during the year 1,744 children attended these centres. The primary object of these clinics is not to treat disease but to advise mothers in the proper nurture of their children and to ensure that the infants are growing and developing normally. If any defects are observed they are referred to the family doctor.

In order to encourage the mothers to discuss their problems freely with the nurse or doctor it is essential to create a friendly atmosphere.

A new clinic was opened on 12th February, 1951, in the Westborough Methodist Schoolroom, Green Lane, Dewsbury, to serve the residents of the Westborough area.

### Vitamin Supplements.

Fruit Juices and Cod Liver Oil are distributed through the Child Welfare Clinics.

Cod Liver Oil and also Vitamin A and D Tablets are obtainable free of cost. Mothers may obtain orange juice at 5d. per bottle.

The "take-up" of these supplements expressed as a percentage of "potential" is set out below. Comparision with the "take-up" in the East and West Ridings of Yorkshire shows that Dewsbury mothers are not taking as much advantage of the scheme as they might, and that the "take-up" generally in all areas is very poor.

Take-up as Percentage of Weekly Potential:-

	Orange Juice.	Cod Liver Oil.	A & D Tablets.
Dewsbury	$24 \cdot 2$	17 · 1	$28 \cdot 1$
per 13 weeks	$20 \cdot 7$	$23 \cdot 0$	$31 \cdot 0$
•	$19 \cdot 4$	$23 \cdot 7$	$29 \cdot 5$
	$21 \cdot 1$	$21 \cdot 1$	$32 \cdot 5$
East & West Ridings	$25 \cdot 3$	$25 \cdot 3$	$35 \cdot 2$
per 13 weeks	$29 \cdot 27$	$23 \cdot 69$	$34 \cdot 23$
	$24 \cdot 06$	$25 \cdot 7$	$33 \cdot 56$
	$23 \cdot 5$	$27 \cdot 2$	$33 \cdot 2$

The Food Executive Officer, Batley, has kindly supplied these figures.

### DENTAL SERVICE.

Report by the Senior Dental Officer-J. R. Tuxford.

Dental treatment continued to be available for expectant and nursing mothers, and pre-school children at the Dental Clinic at Northfields House, Halifax Road, as in 1950.

The treatment was on a more restricted scale than in 1950, due to the fact that I was without skilled chairside assistance for five months, which fact considerably lengthened the time required for treatment of a patient.

The percentage of mothers requiring dentures shows a slight increase (28% in 1950, 29% in 1951). Most of the mothers attending, express a desire to keep their own teeth if possible, but in some cases total extractions are necessary. Quite a number of these cases have had no regular dental treatment for years, in some instances the last time being when they attended the School Dental Clinic and had treatment there. I think, however, that some mothers profit by their own experiences, and if they have small children they bring them with them when attending, so that in the words of one mother "I don't want his teeth to get into the same state as mine are."

The lack of regular general anaesthetic sessions is keenly felt, as when multiple extractions are necessary in various quadrants of the month, if a local anaesthetic is used the number of visits required is more. In most cases a general anaesthetic is the more useful for a pre-school child, both from the point of suitability and time saving.

Dentures, as well as other forms of dental treatment are available free of charge for expectant mothers and nursing mothers until the child is one year old.

### Numbers provided with dental care.

	Examined	Needing Treatment	Treated	Made Dentally Fit
Expectant and Nursing Mothers	73	73	*94	72
Children under five	48	43	43	41

<sup>\*21</sup> cases examined in 1950 are included in this figure as they were either treated, or treatment was completed, in 1951.

### DAY NURSERIES.

### Eightlands Day Nursery.

This nursery was open on 249 days. The attendances were as follows:—

Age.	0—1 yr.	1—2 yrs.	Over 2 yrs.	Total.
Attendances	 1317	3005	1632	5954

The number of approved places is 35 and the average attendance was 24.

29 children were affected by chickenpox, 24 by whooping cough, 2 by measles and 2 by mumps. There were no cases of diphtheria.

The maximum attendance was 36 (9 under 1 year of age and 27 over 1 year) and the minimum attendance was 6 (1 under 1 year of age and 5 over 1 year). The nursery was closed for one holiday week but was not closed on account of infectious disease.

Low attendances were experienced in April and May due to an outbreak of chickenpox and in June and July due to whooping cough.

There were 35 children on the rolls at the end of the year, all the mothers concerned were working full-time.

At the end of the year the nursing staff numbered 8 and were comprised as follows: Matron, Deputy Matron, Staff Nurse, and 5 Nursery Assistants.

### Ravensthorpe Day Nursery.

This nursery was open on 249 days. The attendances were as follows:—

Age.	0—1 yr.	1—2 yrs.	Over 2 yrs.	Total.
Attendances	 1395	2617	1865	5877

The number of approved places is 35 and the average attendance was 24.

Measles affected 13 children, whooping cough 6, scarlet fever 1, and chickenpox 1. There were no cases of diphtheria.

The maximum attendance was 43 (11 under 1 year and 32 over 1 year) and the minimum attendance was 4 (2 under 1 year and 2 over 1 year). The nursery was closed for one holiday week but was not closed on account of infectious disease.

Low attendances were experienced in January and February due to measles and influenza and in October, November and December due to mothers working short-time owing to the slump in the textile trade.

There were 34 children on the rolls at the end of the year, 27 of the mothers concerned were working full-time and the remainder part-time.

At the end of the year the nursing staff numbered 9, comprised as follows: Matron, Deputy Matron, Nursery Nurse, 4 Nursery helpers and 2 Nursery students.

The Nursery students continue to reside at Eightlands Day Nursery, but their practical training is carried out at Ravensthorpe.

The gross cost of the two nurseries for the year ending 31st March 1952 was £9,050; parental contributions being £617.

### Daily Minders.

There were no daily minders receiving fees from the authority under Section 22 of the National Health Service Act 1946, at the end of the year.

### Mother and Baby Homes.

There are no Mother and Baby Homes provided by the authority, but three expectant mothers were sent to homes, payment being made by the authority on an *ad hoc* basis.

### Illegitimate Children.

The authority do not employ a Social Worker for the purpose of Circular 2866.

The mothers of illegitimate children are visited by the Health Visitors, who offer advice on the care of, and the services available for such children.

### MIDWIVES SERVICE.

(National Health Service Act 1946—Section 23).

There are four domiciliary midwives employed by the Corporation, all of whom are qualified to administer gas and air analgesia in accordance with the requirements of the Central Midwives Board. Each midwife has a gas and air apparatus.

The following table gives a summary of the work carried out. In addition the midwives attended 558 maternity cases who were discharged before the fourteenth day from Moorlands Maternity Home and Staincliffe General Hospital.

# Domiciliary Midwifery-1951.

### Hospital Midwifery.

The work of the two local maternity units in respect of Dewsbury mothers is shown in the following table:—

	Maternity Home	Staincliffe General Hospital
Number of Dewsbury mothers admitted and delivered	*577	179
Number of Dewsbury mothers who had twins	6	3
Number of Dewsbury babies born:	-00	100
(a) alive and still-born	583	182
(b) still-born	11	5
Number of Dewsbury mothers refused admission	71	2
Number of Dewsbury emergency admissions:		
(a) social	_	
(b) medical	10	6
Number of Dewsbury babies who were premature		
on birth weight:		
(a) born alive	30	16
(b) still-born	7	4
(c) born before admission	1	

<sup>\*</sup>Includes 1 mother delivered before admission.

The 71 Dewsbury mothers who could not be admitted to Moorlands on account of full booking, were subsequently admitted to Staincliffe Maternity wing.

In general it can be said that for all practical purposes, all prospective mothers wishing for hospital confinement were admitted to either Moorlands Maternity Home or Staincliffe General Hospital.

HEALTH VISITING.

(National Health Service Act 1946—Section 24).

The duty of a Health Visitor is defined as being "for the purpose of giving advice as to the care of young children, persons suffering from illness and expectant and nursing mothers, and as to the measures necessary to prevent the spread of infection."

The town is divided for health visiting purposes into areas, each health visitor being allotted an area.

During 1951 the health visitors paid 923 visits to expectant and nursing mothers, 6,332 visits to children under one year of age, and 9,437 visits to children between the ages of one and five. Other visits, *i.e.*, visits re stillbirths, infectious diseases, etc., totalled 1,118.

The health visiting staff numbered 7 at the end of the year. of these five are fully qualified, and 2 are approved health visitors. In addition to this number one student health visitor was training at the University of Leeds.

The health visitors have combined appointments as health visitors and school nurses, and such an arrangement provide for a child being cared for by the same nurse from birth until school-leaving age.

### HOME NURSING.

(National Health Service Act 1946—Section 25).

The Corporation are entirely responsible for the home nursing service and at the end of 1951 four whole-time and six part-time nurses were employed on home nursing duties.

The service is worked in close collaboration with the General Practitioners and there is every reason to believe that the work carried out is deeply appreciated.

The following tables show the number of cases nursed during 1951.

### Statement of Cases Nursed, January 1st to December 31st, 1951.

### VACCINATION AND IMMUNISATION.

(National Health Service Act 1946—Section 26)

### Immunisation.

The number of children immunised during the year was 586; of these 512 were between 0 and 5 years, and 74 between 5 and 15 years, whilst the number aged less than 1 was 270 representing only 29% of the number of babies born in the previous year.

It is estimated that the number of children in the Borough immunised at the end of 1951 was  $43 \cdot 2\%$  of those between 0 and 5 years and  $73 \cdot 6\%$  of those between 5 and 15 years, compared with  $46 \cdot 3\%$  and  $68 \cdot 7\%$  respectively at the end of 1950.

The number of immunisations carried out since 1935 when immunisation against diphtheria was first practised in Dewsbury are as follows:—

1935	 77
1936	 10
1937	 76
1938	 26
1939	 19
1940	 1680
1941	 1865
1942	 1350
1943	 1675
1944	 751
1945	 615
1946	 526
1947	 899
1948	 758
1949	 673
1950	 624
1951	 586

These 586 immunisations include 119 children who have received combined A.P.T. and Whooping Cough vaccine (Glaxo) in doses of '5, '5 and 1 c.c. at monthly intervals. Private doctors immunised 127 of the children against diphtheria and 30 against diphtheria and whooping cough (combined prophylactic).

In addition, during the year 306 children received one single boosting dose; 280 of these children were between 5 and 15 years and 26 were under 5 years, and it is apparent that a number of children who are immunised in the first and second year are not receiving a booster dose at school entry.

### Vaccination.

The following are the figures of vaccination against smallpox:—

Under 1	14	5—14	15 & Over	Total
102	21	3	69	195

These figures show an improvement over the figures for the previous year, when a total of 113 vaccinations was made.

In addition to the foregoing total of 195 vaccinations, there were 48 re-vaccinations during the year.

In spite of the improvement, the number of infants being vaccinated is meagre and does not confer any degree of protection upon the community in general.

### AMBULANCE SERVICE.

(National Health Service Act, 1946—Section 27).

The total number of vehicles at the end of the year was 6 Ambulances and 3 Sitting Case Cars.

The personnel employed numbered 13 and were under the immediate direction of Mr. L. Banham, the Council's Transport Manager.

The following table shows the work done by this service during the year:—

	Total No. of Journeys	No. of Accident and other Emergency Calls	Total No. of Patients carried	Total Mileage
6 Ambulances 3 Cars	3755 5684	257 168	5855 9586	24178 46764
TOTALS 1951	9439	425	15441	70942
TOTALS 1950	12589	384	16561	79709

It will be noticed that there was a decrease of 1,120 in the number of patients carried as compared with the previous year, and a corresponding decrease of 8,767 miles on the years mileage.

The comparative figures for mileage for the years 1949, 1950 and 1951 are as follows:—

	Ambulances	Sitting-Case Cars	Total
1949	29905	58604	88509
1950	30860	48849	79709
1951	24178	46764	70942

### PREVENTION OF ILLNESS, CARE AND AFTER-CARE.

(National Health Service Act 1946—Section 28)

### Tuberculosis Visitor.

The tuberculosis visitor who is responsible for the care and after-care of tuberculosis patients, attends the Dispensary Clinical session at the Dewsbury centre (Northfields House) twice a week and acts as clinical nurse; this arrangement is a useful one as she is enabled thereby to understand the clinical state of the patient and this association with the chest physician renders her more useful to the patient in the care and after-care work.

Though the Regional Board have the responsibility of clinical care of the tuberculosis patients and now control on behalf of the Minister, tuberculosis sanatoria, dispensaries and mass miniature radiography, the domiciliary medico-social care of the patient and the families is a duty of the local health authority.

The work of the Tuberculosis visitor is set out below:—

### Home Visiting.,

Visits to new cases Visits to patients und Visits to patients re n	der domi	ciliary	treatm	ent	
Visits to homes of pa Visits to contacts	itients in	Sanat	oria 		 95 280
Unsuccessful visits	 Total				

### Provision of Free Milk.

Number of patients supplied with milk during the year ... 74 Number of pints of milk supplied during the year 53,603

### Convalescent Care.

During 1951 six cases were afforded convalescent care.

### Loan of Nursing Requisites.

Goods were loaned free of charge. A deposit is payable when the item of equipment is collected, this is returnable if the requisite is returned in good condition.

Loans of various items totalled 172 during the year.

### Health Education.

During the year full use was made of the advisory and information service of the Central Council for Health Education.

All clinics display posters on health topics which are systematically changed.

### V.D. Social Work.

The Council joins with the West Riding County Council in providing the services of a V.D. Social Worker who is centred on Dewsbury General Hospital Special Treatment Centre.

Details of the work carried out by the social worker are set out below.

Number of cases followed up as defaulters:-

Syphilis ... 55 Gonorrhoea ... 45 Non-venereal 19

Of the 55 cases of syphilis followed up 50 attended the treatment centre, 4 failed to attend and 1 was untraceable. Of the 45 cases of gonorrhoea followed up, 30 attended the treatment centre, 11 failed to attend and 4 were untraceable. Two of the non-veneral cases attended the treatment centre, 15 failed to attend and two were untraceable.

Number of cases traced as contacts ... ... 29 (All of whom attended the treatment centre).

Number of Dewsbury cases notified as alleged sources of infection ... ... ... 8 (of whom 5 were traced, 3 of these attended, including two who were in prison, the remaining 3 were untraced insufficient information being received).

The total number of visits made for all purposes including attendances at clinic sessions was 784.

### DOMESTIC HELP SERVICE.

(National Health Service Act, 1946, Section 29).

The demand for this service is still on the increase, the bulk of the demand being on the grounds of Old Age, Infirmity and Chronic Sickness. At no time during the year was there less than 50 cases of this type receiving attention. There has been a decrease in the number of applications received for assistance during confinements.

The fractional system of employment is employed in as much as a home help attends a number of households in one week but does not split a morning or an afternoon for different households except in exceptional circumstances.

Maternity cases are given priority which often results in less important cases being deprived of assistance for a short time.

The following table shows the number of cases helped, etc., as compared with 1950:—

	19	50	1951		
	Part-	Full-	Part-	Full-	
Number of cases halped :	time	time	time	time	
Number of cases helped:					
Maternity	8	54		36

Total	120		107		
Staff of Domestic Helps at:					
lst January	7	8	12	6	
31st December Number of hours worked	$\frac{12}{10544\frac{1}{4}}$	$\frac{6}{13459\frac{1}{4}}$	$\frac{19}{15808\frac{1}{2}}$	$\begin{array}{c} 10 \\ 12947 \end{array}$	
Number of hours worked	109447	194997	100002	14941	

The Domestic Helps were paid at the rate of 1s.  $8\frac{1}{4}$ d. per hour until 27th August, 1951, when the rate was increased to 1s. 10d. per hour. Uniform overalls are provided, travelling expenses are paid and household equipment is available, on loan, where necessary.

### MENTAL HEALTH SERVICE.

(National Health Service Act 1946—Section 51).

The Mental Health Sub-Committee is comprised of the Health Committee and meetings are held monthly.

No duties are delegated to voluntary associations.

An Occupation Centre is in the course of erection and it is hoped to open this before the end of 1952.

### Care of Mental Defectives.

### Institutional Provision.

At the end of 1951, there were 74 mental defectives from Dewsbury in Institutions. 40 were males and 28 females (plus 6 cases, 3 males and 3 females "on licence leave").

These defectives were housed as follows:— Males. Females. 22 St. Catherine's Institution, Doncaster 18 Rampton State Institution ... 1 2 2 Monkton Hall, Jarrow Whixley Mid-Yorks Institution 2 1 The Mansion, Kirkburton ... \_ \_ l Winestead Colony 1 Westwood Institution, Bradford 1 Lemmington Hall, Alnwick ... . . . Oulton Hall Institution 8 Grenoside Institution, Sheffield Aycliffe Hospital, Darlington 1 ... 2 1 Meanwood Park, Leeds . . . Stansfield View, Todmorden 1 1 Castleburg Hospital, Giggleswick ... 28 40

At the end of the year 3 males and 3 females were awaiting vacancies in institutions.

### Guardianship.

There were 13 mental defectives under guardianship—8 males and 5 females.

### Statutory Supervision.

There were 43 mental defectives under statutory supervision, 30 males and 13 females, and of these 24 were under school leaving age.

# Education Act 1944, Section 57 and Education Act (Miscellaneous Provisions) 1948, Section 8.

Cases notified under Section 57 (3) 5 males and 2 females Cases notified under Section 57 (5) 1 male and 1 female.

Female:	Certified Voluntary Sec. 20	•••	•••	•••	13 18 Nil
	Tota	al	•••		51 =

The discharges include 14 deaths (7 males and 7 females).

### Outside Cases.

In addition 1 male and 9 females were admitted to mental hospitals who were not ordinarily resident in the County Borough.

### Work of the Duly Authorised Officers.

In addition to their statutory duties under the Lunacy and Mental Treatment Acts they are responsible for the supervision of mental defectives and this includes supervision of, and making reports on, mental defectives out on licence from institutions.

### Mentally Ill-Visits

### Mental Health Worker.

A Psychiatric Out-Patient Clinic is held at Dewsbury General Hospital. Dr. P. F. Fletcher is the Consultant Psychiatrist and the Mental Health Worker assists at this clinic.

The number of patients referred for after-care shows a slight increase on last years total.

A brief summary of the cases dealt with by the Mental Health Worker and under care at the 31st December, 1951, is given below:—

No. of cases under care at be	ginni	ng of y	ear		37
No. of cases referred during y	year			•••	43

Sanitary Inspector's Department,
Municipal Buildings,
Halifax Road,
Dewsbury.

To the Chairman and Members of the Health Committee of the County Borough of Dewsbury.

MR. CHAIRMAN AND GENTLEMEN.

# CHIEF SANITARY INSPECTOR'S REPORT, 1951.

I have pleasure in submitting my Annual Report on the work of the Sanitary Department for the year ending 31st December, 1951.

On the various sections of the work of the Department I have commented under their respective headings.

In presenting this report I would like to thank the Chairmen and Members of the Health and Housing Committees for their help during the year and express my appreciation to the Medical Officer of Health for his ready assistance.

All the duties of the Sanitary Inspector's Order are the responsibility of the Sanitary Department except Cleansing. The District Sanitary Inspectors have rendered loyal service and the co-operation of all branches of the staff of the Department, inspectorial, clerical and workmen, has made the progress recorded in this report possible.

I am,

Your obedient servant,

H. HAWORTH, M.S.I.A.,

Chief Sanitary Inspector.

#### Staff.

The inspectorial staff consists of the Chief Sanitary Inspector with five District Sanitary Inspectors one of whom is appointed Deputy Chief Sanitary Inspector. All the Inspectors hold the statutory qualification for Sanitary Inspectors and the Certificate of the Royal Sanitary Institute for Meat and Other Food Inspection. Additional qualifications they hold include the following:—

- "Sanitary Science as applied to Buildings and Public Works."
- "Smoke Inspector's Certificate."
- "Institute of Sanitary Engineers."
  "Diploma in Public Administration."

The two vacancies for District Sanitary Inspectors which existed during the year were filled.

Three clerks and two van drivers/disinfectors (trained in rodent control) are also on the staff.

#### SUPERVISION OF FOOD SUPPLIES.

#### Adulteration.

The guide to Local Authorities for the rate of sampling is three samples for each thousand of the population. Taking Dewsbury's population as roughly 50,000 this is equivalent to 150 samples a year.

Sampling on a greater scale has been practised in Dewsbury, and 372 samples were taken for chemical analysis during the year. This is more than double the rate and is equivalent to 7.4 samples per thousand.

The number of samples taken during the past five years is set out below:—

1947	1948	1949	1950	1951
401	432	424	356	372

Taking the population as 50,000 approximately, the rate per 1,000 equals:

1947 1948		1949	1950	1951
8.0	8.6	8.5	$7 \cdot 1$	7.4

The number of milk samples taken during the past two years has increased as follows:

	1947	1948	1949	1950	1951
Number taken	114	111	122	201	182
Number adulterated	3	1	1	2	7
Percentage adulterated	$2 \cdot 63$	0.90	0.82	1.00	3.78
Drugs:					
Number taken	19	22	31	12	2
Number adulterated	0	0	0	0	0
Percentage adulterated	Nil	Nil	Nil	Nil	Nil

68 visits were made in respect of formal Food and Drugs sampling and 282 visits for the purpose of taking informal samples under the Act.

# Samples of Food and Drugs sent to the Public Analyst for Examination during the year 1951.

		with water.

65 informal samples of ice cream had a fat content ranging from 3.10% to 14.52%.

Warnings were given to the firms concerned in all the above cases, in the case of sample No. 443, the firm closed down.

#### MEAT INSPECTION.

Home killed meat retailed in Dewsbury comes from Spenborough where it is inspected at the time of slaughter. Meat is distributed to the Dewsbury butchers through the Meat Allocation Centre at Batley Carr, which is outside the Borough, although certain butchers receive their supplies by direct transport from Spenborough.

There is no official slaughtering in Dewsbury other than of privately owned pigs. These are inspected at the time of slaughter by the Sanitary Inspectors. Regular visits are also made to meat shops and meat inspected as allocated.

#### ICE CREAM.

The quality of ice cream has continued to improve." The shortage of materials after the war led to the production of ice cream poor in food value. In spite of the difficulties a standard of  $3\cdot0\%$  fat was asked for in the Borough, although in 1948 the Ministry of Food felt they could only enforce  $2\cdot5\%$ , with the materials then available.

An easing of the materials situation led to the present legal standard of  $5\cdot0\%$  fat, 10% sugar and  $7\cdot5\%$  milk solids other than fat.

The minimum standard required for milk, as set out in the Sale of Milk Regulations, 1939, made under the Food & Drugs Act, 1938, is that milk should not contain less than  $3\cdot0\%$  butter fat and  $8\cdot5\%$  solids not fat. Analysis of milk samples taken under the Food & Drugs Act during the year showed the following results:—

Moi	.+1.		Number	Avera	ge Results.	Number

December	•••	•••	7	3.73	8 • 59	_
Total	•••	•••	182	3.92	8.59	7

At the time of writing this report, this 5.0% fat standard has been reduced again, owing to shortage of materials. Presumably the choice lies between quality and quantity, and a policy of sacrificing quality is always regretable.

It is interesting to note the results of analysis of samples taken during the past five years by this Department, which are shown in the following table:—

Fat Content	1	947	1	948	ı	949		950	19	951
rat Content	No.	%	No.	%	No.	%	No.	%	No.	%

268 visits were paid to ice crean prenises.

### Bacteriological Analysis.

There are eight producers of ice cream with manufacturing premises within the Borough. Production is controlled by the Ice Cream (Heat Treatment, etc.) Regulations, 1947-1951.

Not only are these premises regularly inspected but samples are taken also from vendors manufacturing outside the district.

The grades given to samples of ice cream are based on the time taken to reduce Methylene Blue in the laboratory and are as follows:—

Time taken to reduce Methylene Bliv.

Grade	1		 $4\frac{1}{2}$ hours or more
,,	2		 $2\frac{1}{2}$ to 4 hours
"	3	• • •	 ½ to 2 hours
,,	4	• • •	 0

Judgment of bacteriological cleanliness is based on a series of samples—too much attention to any one given sample is useless for technical reasons. It has been suggested that over a six monthly period 50% of a vendor's samples should be Grade 1, 80% in Grades 1 and 2, not more than 20% in Grade 3 and none in Grade 4.

The Graded resuls of the samples with differentiation for ice cream manufactured in the Borough and outside, are as follows:—

Manufactured in Dewsbury-				
	Grade 1	Grade 2	Grade 3	Grade 4
Methylene Blue Test	21	9	13	9
, anufactured outside Dewsbury-				
"umber of Premises 15.

# GENERAL SANITARY INSPECTION.

To deal adequately with insanitary dwellings is becoming increasingly difficult. There are many houses in the Borough which are worn out, although, of necessity, they continue to be occupied. These houses cannot be repaired at a reasonable cost and the only satisfactory solution is for them to be demolished.

Whilst a considerable amount of repair work is done, following action by this Department, the ratio of building repair costs to rent is regularly given by owners as the reason for their reluctance or inability to effect repairs. In many cases the repair work is done after informal notices under the Public Health Acts have been served, but increasing attention is necessary to follow these up. The policy of interviewing owners in difficult cases has proved itself and a measure of co-operation achieved. However it was necessary to report cases to the Council for statutory action, formal abatement notices being served in 87 cases, of which 76 were complied with during the year.

The difficulties of securing a reasonable standard of existing dwelling accommodation seem to become greater and the repair position worse, with houses fast falling into decay.

The classification of all new applications for Council houses is done by the Sanitary Inspectors and 418 visits were made for this purpose.

The tables which follow give some indication of the varied nature of the work of this Department under the heading of general sanitary administration:—

### RODENT CONTROL.

#### Rats and Mice.

During the year 288 inspections, with 1,704 re-inspections were made of infested premises, and the necessary steps taken to clear the premises.

The Prevention of Damage by Pests Act, 1949, requires every local authority to take such steps as may be necessary to secure as far as practicable that their district is kept free from rats and mice. I am pleased to report good progress in this The best results are secured where early discovery of infestation is made and prompt action taken. It has often happened in the past that business firms have not shewn an early appreciation of their obligation to keep their premises free from rats and mice.

I am pleased to report that more and more firms are voluntarily asking for the assistance of this Department and are becoming increasingly aware of the damage that can needlessly occur.

During the year two treatments were given to the Corporation sewers in accordance with the recommendations of the Ministry of Agriculture. The Borough Engineer co-operated in this work.

# SMOKE ABATEMENT.

161 routine smoke observations were taken, with the following results:-

r of boiler plants where smoke emission	
ravened Public Health Act. 1936, and Dewsbury	
oration Brolaws	2
r of bailer plants where no nuisance caused	5

47 inspections were made of boiler houses and plants, and appropriate action taken where nuisances occurred. Certain chimneys continue to give trouble with emission and a constant check is necessary. There is no doubt that the co-operation of the Ministry of Fuel and Power is invaluable in providing practical stoking demonstrations, plant testing and the allocation of better quality fuels.

### Rag Flock.

The Rag Flock and Other Filling Materials Act, 1951, came into force during the year. This Act is designed to secure the use of clean filling materials in upholstered articles and other articles which are stuffed or lined. Premises where filling materials are manufactured now require licensing and 3 licences were issued in the Borough and one registration was made under the Act.

10 formal samples of Rag Flock were obtained and submitted to the Public Analyst. All samples were reported as genuine and complied with the requirements of the Rag Flock Acts. The individual results were as follows:—

Sample	Chlorine as	Solub	le Chlo	rides
No.	Allowed.			Found.
2	30 parts per 100,000		$17 \cdot 0$	parts per 100,000
3	,,		$11 \cdot 0$	,,
4	,,		$6 \cdot 0$	,,
5	, ,		$5 \cdot 0$	,,
6	, ,		8.0	,,
7	, ,		$6 \cdot 8$	, ,
8	,,		$4 \cdot 4$	, ,
9	, ,		$12 \cdot 8$	, ,
la	, ,		$9 \cdot 0$	,,
2a	, ,		$6 \cdot 0$	,,

1 informal sample of Wool Flock was taken, which showed a result of 132 parts per 100,000 chlorine as soluble chlorides.

#### Fertilisers and Feeding Stuffs.

10 samples of Fertilisers and 6 samples of Feeding Stuffs were taken.

#### Pharmacy and Poisons Act.

44 visits were made to registered premises under this Act. There were no serious contraventions of the Act, but minor contraventions were put right by informal action.

#### Eradication of Vermin.

Disinfection of verminous premises is carried out by gassing or by the use of liquid or powder insecticides. 7 houses containing 10 rooms were disinfested, and 20,113 articles of bedding, clothing, furniture, etc., were disinfected.

As well as formal action taken when verminous premises are found by the Inspectors, many people come along for advice and voluntarily enlist the help of the Department in ridding their premises of vermin. There is good and steady progress being made in this work and 81 visits were made under this heading.

#### Infectious Diseases.

No. of visits to invest	tigate cas	es of in	fectious	disease	105
No. of visits to inv	estigate	cases o	of food	poisoning	g 14

No. of articles ,,	,,	,, ,	, ,,	,,	15,878
No. of library books	**	,, ,	, ,,	,,	<b>6</b> 6

In all cases the bedding is collected by the staff of the Department, and steam disinfected.

#### Refuse Accommodation.

741 inspections were made, 43 ashpits closed, and 162 dust bins renewed or provided in lieu of ashpits.

#### Factories Act, 1937.
